Summary

Data Scientist with a strong foundation in Python, Machine Learning, and Data Analysis. Experienced in working with real-world datasets, building predictive models, and generating insights to support data-driven decision-making.

Skills

Programming & Tools: Python, SQL, Power BI, Streamlit, Excel, Git, Jupyter Notebook

Libraries & Technologies: Pandas, NumPy, Scikit-learn, Plotly, Joblib

Data Analysis: Data Cleaning, Exploratory Data Analysis (EDA), Data Preprocessing, Feature Engineering, Data Visualization

Machine Learning: Regression, Classification, Basic Model Building, Model Evaluation (Accuracy, Precision, Recall, F1-Score), Neural Network Basics (TensorFlow, Keras)

Experience

Data Scientist Intern

March 2026

Pratinik INFOTECH (Remote)

Tools Used: Python, Streamlit, Pandas, NumPy, Scikit-learn, Plotly, Joblib, Git

- Worked on real-world datasets by performing data cleaning, preprocessing, and exploratory analysis to identify meaningful patterns and trends.
- Handled imbalanced data scenarios with a focus on improving detection of critical cases and making the solution more practical.
- Evaluated model performance using key metrics and refined predictions through iterative testing and improvements.
- Developed a user-friendly interface for real-time and batch predictions, improving usability and accessibility.

Projects

Fraud Shield | Python, Streamlit

- Developed an end-to-end fraud detection system by cleaning, preprocessing, and transforming transactional data for machine learning workflows.
- Addressed class imbalance using appropriate strategies, focusing on improving fraud detection recall to minimize missed fraudulent cases.
- Trained and optimized multiple machine learning models through tuning and threshold adjustment to improve prediction performance.
- Built a Streamlit-based application for real-time transaction analysis, enabling users to assess fraud risk effectively.
- Evaluated performance using PR-AUC, ROC-AUC, and confusion matrix analysis to ensure reliability in real-world scenarios.

Customer Trends Analysis and Business Insights | Python, SQL, Power BI

- Performed end-to-end analysis of customer transaction data by cleaning, preprocessing, and organizing datasets to maintain consistency.
- Used SQL to analyze customer behavior and identify key trends in purchasing patterns, segmentation, and revenue contribution.
- Developed interactive Power BI dashboards with relevant KPIs to visualize sales performance and customer insights.
- Generated actionable insights on high-value customers and product demand, supporting better business decisions.

Certifications

- **Deloitte Data Analytics Job Simulation – Forage:** Gained hands-on experience in data analysis and solving real-world business problems.
- **Python for Data Science – Udemy:** Learned data analysis, data manipulation, and core machine learning concepts using Python.

Education

B.Tech in Computer Engineering

2023 – 2027

Madhuben and Bhanubhai Patel Institute of Technology (CVMU)

CGPA: 8.52 / 10 (Till 5th Sem)
